

ABOUT ME

Passionate about delivering quality and guiding ideas from concept to completion. I believe great work starts with ownership, clarity and purpose

TECHNICAL SUMMARY

Languages: PHP, JavaScript, TypeScript, SQL, HTML5, CSS, SCSS

Frameworks: Laravel, Vue.js, Angular, CodeIgniter, Node.js, Phalcon PHP
Cloud / DevOps: AWS (EC2, S3, RDS, Lightsail), Docker, Linux, Git, CI/CD

Databases: MySQL, SQL, Schema Design, Optimization

Payments: Stripe (Checkout, PI, Connect), Payex, Toyyibpay

Web3: NFT, SBT, Token Minting, Wallet Integrations, Metadata Pipelines

Systems: JWT, REST APIs, OAuth2, Webhooks, Microservices

Tools: Figma, Postman, Docker Compose, MySQL Workbench

Platforms: Telegram Mini Apps, WordPress, WooCommerce

Adib Omar

Versatile Software Engineer

EXPERIENCE

Senior Software Engineer / Acting CTO

Fortifi Sdn Bhd | Kuala Lumpur **May 2024 – Oct 2025**

- Directed engineering strategy and acted as CTO, overseeing architecture, delivery, DevOps, and technical planning across multiple products.
- Expanded the company from 3 > 12 team members by establishing hiring criteria, onboarding processes and engineering culture.
- Supervised and mentored a team of 5 engineers, improving output consistency and review quality by introducing engineering standards and Git workflows.
- Architected and delivered 4+ production web platforms using Laravel, Vue.js and MySQL, improving uptime and stability by 35% through refactoring and performance tuning.
- Built and launched a Telegram Mini App serving real-time interactions, RBAC flows and integrated payments, reducing support workload by 30%.
- Engineered automated pipelines for NFT/SBT minting, metadata generation, and wallet verification, cutting manual operational steps by ~70%.
- Developed a Web3 livestream platform with seat gating, event validation and Stripe-powered payments; improved viewer verification accuracy by 40%.
- Designed a Web3-enabled social platform with reactions, XP/token mechanics and SBT identity, increasing user engagement during testing by ~50%.
- Integrated Duffel API for flight search and booking, enabling users to complete multi-step journeys directly inside the Mini App.
- Modernized legacy backend systems, reducing bug frequency by ~45% and improving load performance by 30–50%.

Web Team Lead

Etctech Global Sdn Bhd | Kuala Lumpur **Aug 2023 – Mar 2024**

- Led a web engineering team delivering internal platforms and enterprise client websites.
- Migrated frontend architecture from jQuery to Vue.js, improving load performance by up to 40% and reducing frontend defects by ~25%.
- Engineered full-stack modules using Laravel, Vue.js, SCSS and MySQL, shortening development cycles by 20–30%.
- Reviewed PRs and introduced coding guidelines, increasing team code quality and reducing rework hours.
- Coordinated delivery with design, backend and project teams to ensure on-schedule deployments.

EDUCATION

Diploma in Database & Web Application
Kolej Vokasional Balik Pulau | Penang, Malaysia

2017 – 2019

- Student Council (MPP) representative
- Public speaker for institutional events
- Represented college in national/state exhibitions
- Appointed “Penashihat Industri” for career guidance
- Completed foundational studies in programming, systems and database administration

Full Stack Engineer

ABSS | Kuala Lumpur **Aug 2022 – Jul 2023**

- Built enterprise applications using Angular, SCSS, Laravel and Phalcon PHP to support internal accounting business systems.
- Led UOB Bank API integration, resulting in a fully compliant and secure enterprise banking module.
- Mentored junior developers in API design, documentation analysis and secure coding practices, improving onboarding time by ~30%.
- Created REST APIs and backend microservices integrating multiple external systems.
- Set up Docker-based development environments, reducing setup time from 2 days → 2 hours.
- Improved authentication reliability through enhanced JWT flows and secure data handling.

Development Team Lead

BestWeb Technologies Sdn Bhd | Bukit Jalil **Dec 2021 – Jul 2022**

- Managed a development team delivering web and mobile solutions across multiple industries.
- Modernized legacy platforms using Laravel and CodeIgniter, reducing page load times by 35%.
- Engineered reusable modules, cutting development time for repeated features by ~40%.
- Integrated external APIs, banking gateways and logistics workflows.
- Designed UIs using HTML, CSS, Bootstrap, jQuery and coordinated with mobile teams on API requirements.
- Oversaw deployments on AWS (EC2, Lightsail, S3, RDS) achieving stable hosting environments.

Full-stack Developer

BestWeb Technologies Sdn Bhd | Bukit Jalil **Feb 2020 – Aug 2021**

- Delivered full-stack systems using CodeIgniter and Laravel, supporting dashboards and reporting modules.
- Built responsive UI/UX using HTML5, CSS, jQuery and Bootstrap, improving usability scores for multiple clients.
- Integrated payment gateways and external APIs, reducing integration time by ~25% via reusable internal templates.
- Implemented JWT authentication and backend security improvements.
- Created reusable backend modules and optimized MySQL queries improving database performance by up to 30%.
- Developed hybrid mobile app features using Flutter.
